hand, and the highly technical manuals of international organizations, on the other. Joy Hecht begins with a history and introduction to national income accounting. The first part of her book explains how the environmental accounts build on the structure of the 1993 System of National Accounts. She then shows the UN approach to accounting applied to pollution, recycling, and the management of natural resources such as forests, minerals, and fisheries. The third section discusses how the accounts approach green GDP and other macroeconomic indicators. The book concludes by going beyond the UN structures to discuss other adjusted macroeconomic measures and how accounting data can be used to build them. National Environmental Accounting is a non-technical introduction to an increasingly important field. It is a must-read for anyone

interested in how environmental accounts can help society move towards greater sustainability. *World Development Indicators 2011* World Bank 2011-04 'World Development Indicators' (WDI) is the World Bank's annual compilation of data about development.
